Vitamin P to  
Decrease the look of  
spider veins & redness  
and for future added protection  
UV-A & UV-B Sunscreen

## Spider Vein & Rosacea Day Cream with Vitamin P

Vitamin P (Rutin & Citrus Bioflavanoids )  
Plus Co-factors can make a remarkable  
difference

Now you can protect your skin from future damage while tackling  
the difficult task of strengthening skin's capillary walls and  
diminishing the appearance of spider veins, and diffuse redness

# The Spider Vein Problem...& The Solution.

---

Spider veins are capillaries that are dilated and expanded beyond their maximum elasticity causing tiny, spidery red threads to appear on the skin surface. These dilated, fragile capillaries do not remove wastes and toxins as efficiently as healthy capillaries. That's why you see redness and feel sensitivity.

**The Solution:** a cream that can help overcome the weakness of capillary walls, as it helps decongest clogged capillaries and helps protect the area from future damage. All these benefits... and more... are Reviva's breakthrough: New Spider Vein Cream!

**What is Vitamin P you ask?** Many years ago a Hungarian scientist (Dr. Szent-Gyorgi) won a Nobel prize for his research on Vitamin C. Within that research, he discovered that rutin and citrus bioflavonoids (part of the Vitamin C complex) were able to uniquely strengthen capillaries, help improve their elasticity and decongest clogged capillaries. He named these bioflavonoids Vitamin P. Vitamin P's benefits can help lighten Rosacea's redness as it helps fight further capillary damage. The medical/pharmaceutical world has seemed to overlook Vitamin P in favor of drugs like "Metrogel." But Reviva Labs contacts with the aesthetician world in Europe enlightened us to their success in treating Rosacea (as well as Facial Spider Veins and Varicose Veins) with Vitamin P, both externally and internally.

# Vitamin P...and More!

To our knowledge, our Spider Vein Day Cream with Vitamin P is another Reviva Labs skin-care first. Rutin (from buckwheat) and citrus bioflavonoids are the elements in our formula known as Vitamin P, proven to strengthen capillary walls...along with grape seed extract as a cofactor.

Stronger capillaries help protect against future damage, as well as improve elasticity. But sensitive spider vein areas also need sun protection, so we've added SPF #15 to the formula, along with a special form of Vitamin C for anti-free radical action. The formula also includes soy and wild yam whose action in improving overall cellular functions helps remove toxins and thus combats the redness caused by congested capillaries.

## Spider Veins Diminish or Vanish.

With daily use, you'll not only improve the look and condition of spider veins today, you'll protect it for tomorrow. You can stop hiding the problem and treat it instead. Also, search for health food store Vitamin C Complex tablets with Rutin, etc.; taken internally will certainly help the external action.

## Tips on Treating Rosacea.

Rosacea area should be treated very gently. Lotion Cleanser instead of soap should be used and heavy towel rubbing or scrubbing of the area should be avoided.

Excessive exposure to sun, wind, or cold and extreme temperature changes should be avoided. Also spicy foods, hot liquids, excess alcohol and stress.

Because it's important to protect the area from the sun, our Spider Vein & Rosacea Cream also contains sunscreens and Vitamin C to help protect against free radicals.

Although the total pathology of Rosacea is not known, skin science does recognize that the capillaries are dilated, fragile and could be congested because such capillaries do not remove wastes and toxins effectively.

And that's part of the beauty of Vitamin P (rutin & bioflavonoids). It helps strengthen capillary walls as it decongests clogged capillaries. The cream's other elements protect against future damage.

And remember rutin and citrus flavanoids (Vitamin P) in our cream are components of Vitamin C Complex tablets sold in Health Food Stores. And that taking C complex tablets internally while using Spider Vein & Rosacea Cream morning and night will speed results.

## Distinction between Vitamin K & Spider Vein/Rosacea Cream

Vitamin K is primarily for bruises, although it has minor benefits for spider veins.

A bruise is a temporary injury in which the capillaries leak blood. . .but the skin isn't broken. Thus, blood collects beneath the surface causing discoloration. Vitamin K Cream seals the capillary to stop the bleeding; the bruise gradually fades.

Totally different, Spider Vein/Rosacea Day Cream works continually to aid capillary strength and function. Particularly when supported by the other elements in our formula.

**# 261 1.5 oz \$ 19.00 retail**

**USE MORNING AND NIGHT**

**INGREDIENTS:** *Sunscreens:* Octyl Methoxycinnamate, Oxybenzone. *Other Ingredients:* Demineralized Spring Water, Glyceryl Stearate, Stearic Acid, Hydrogenated Soy Protein, Rutin, Lactic Acid, Wild Yam Extract, Grapeseed Extract, Citrus Bioflavonoids, Microcrystalline Cellulose, Potassium Sorbate, Sodium Benzoate, Citric Acid, Simethicone.
